

## HOW TO INSTALL A PLUGIN IN A MAC

If you are trying to install a Plugin in a Mac, but you get this sign:

Then you should follow these steps:

1) Open System Preferences. Click in "Security & Privacy."

2) Click in "Click in the lock to make changes."

•••	<>	Security & Priva	асу	Q Search			
	Gen		wall Privacy				
A login password has been set for this user Change Password							
	🗹 Require password	1 5 minutes 🔷 afte	er sleep or screen sav	ver begins			
Show a message when the screen is locked Set Lock Message							
	✓ Disable automatic login						
C	lick the lock to make changes.			Advanced ?			

3) Put your username and Password (it's your name and your password to unlock the computer)

System Preferences is trying to unlock Security & Privacy preferences. Type your password to allow this.		
Username:		
Password:		
	Cancel Unlock	

4) Click in Allow apps downloaded from: "Anywhere", and click in "Allow From Anywhere". Then click in the Lock again to safe.

○●○ < > ⅲ	Security & Privacy	Q Search				
A login	Choosing "Anywhere" makes your Mac less secure. This selection will be reset automatically if unused for 30 days. Instead, you can allow an individual application from an unknown developer by control- clicking its icon and choosing "Open". Allow From Anywhere Cancel					
Allow apps downloaded from: Mac App Store Mac App Store and identified developers Anywhere "WebClientPlugin.pkg" was blocked from opening because it is not from an identified developer.						
Click the lock to prevent furthe	r changes.	Advanced ?				

## That's it!
